

Di-Lib Proposal

Intended use of the system

Di-Lib, is a book publishment system, where readers and writers come together. In this way, readers can easily find a book for themselves and writers can easily publish their books and get to the readers.

Di-Lib, is an easy accessible online library application. In Di-Lib, everyone from 10 to 70 years old can easily use and read or publish book.

Di-Lib's main goal is, help everyone who is interested in books. For writers or anyone who wants to be writer, they can easily publish their book(s) with the readers and get feedback.

It's overall functionality

When the readers log in, they will see a page which they can find categories and a search bar for them to easily find a specific book.

If users ever want to publish a book, only thing they want to do is to click the "publish a book" button, then they go to a publish page. In this page, they can attach the book folder, they can set a category and price for their books.

When the moderators confirm the book, system will automatically publish the book.

Also readers can easily find a book and read the comments of the other readers so they can have a first impression and opinion about book and get to the decision of reading the book or not.

The Di-Lib's working diagram is in the following chart
